In Hebrew- the “Tagin” or “Crownlet” were symmetry arrows to indicate your relative angle into the tetra / cube or matrix..
 In Sanskrit - this same system for indexing your donut’s spiral with respect to the tetra/ cubic lattice.. became the vertical/horizontal bars - Remove them and the identical root of these alphabets emerges!

This perfect equilibrium phase locked between rotational inertia (mass) vs. centripetal implosion inertia - the electronegativity which when recursive/fractal becomes - gravity -- creates the perfected translation of vorticity which is the golden mean spiral on the donut. Recreating this recursion path (‘Flame Letter’ 7 color map is perfectly multiply connected-each color touches all others- rainbow connection) is key to - making voltage from gravity/ the fractality which causes eggs & pine cones to be alive ... AND - Origin of Alphabets ... AND - HOW DNA finishes the 7th stage of recursive BRAIDING - to become TOROIDAL (LORD OF THE RING) and thereby implosively GRAVITY MAKING. In this way DNA begins to sustain the tornado connection to charge moving faster than C light speed - which is it’s measureable potential GRAVITY or BLACK HOLE MAKING POWER. Access to this ‘enlightened’ or blissmaking blood - which bends light, and steers stars - is the ultimate consequence of millions of years of star wars - concerned with which DNA will be allowed enough fractal charge environment, genetic diversity, and FREEDOM - to grow up to be this self steering -implosive - and (POLItically) powerful! This topological symmetry (result of recursive braiding in DNA - ‘Boson 7’, Chloridian science) solution to charge coupling vs gravity in DNA (the RING LORD / Enki Egg making/ enSOULment/ secret of LIFE itself) which is called ‘SOUL’ - And is directly related to the 7/5 physics of the slip knot which is at once: the Heart of the Sun, the symmetry of human heart muscle, and the ANU coeur of hydrogen.
